

[Having problems with your domU network connections?](#) System acting funky when a bunch of virtuals all start at once, or when network traffic gets heavy? You probably have a dom0_mem issue...

[XenServer 4.0 and 4.1 running out of Dom0 memory?](#) This is a fun situation that didn't get fixed for 2 versions, but has been working in the open source version for who knows how long.

[Windows VM crashing on network use?](#) You're all stoked and you've loaded your [GPLPV drivers](#) and then your Windows VM crashes...

More tips to come...
